CS 470 Final Reflection

<https://www.youtube.com/watch?v=7F56DM4nUo0>

This course taught me a lot about serverless services with the use AWS web service. I also got to learn about containerization with using Docker. I feel like I mastered the skills in setting up AWS web services. One of my strengths as a software developer is that I know how to search on Google and find help outside my scope of peers and professors. This is a good advantage because software is always changing.

I think most web applications are going serverless. Serverless is a new concept that is important to know in the computer science industry right now. My skills in knowing how to setup serverless services like AWS would set me apart from other applicants in the industry. Serverless concepts are new and great solutions for upcoming companies. It can handle scalability and minimize costs to resources that are being used. This is why many companies, today, are going serverless.
